Termination Instructions

SCP-EasyFiber™

SC Type Fiber Optic Connectors - APC (angled)
Single Mode & Multimode Distribution Cable

SCP Part #:
F-CON-SM-SCA

SCP ®
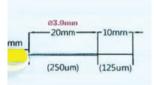

Insert the connector boot and adapter tube onto the cable

Strip outer jacket about 50mm to reveal 900-micron fibers

Measure from the end of the jacket and make a mark between the 250µm and 125µm section

Strip the buffer to the 250µm mark using the middle hole, then the small hole on the stripper in short increments

Cleave your fiber strand to 10mm from the 250µm measurement mark

Strip the remaining 20mm of buffer from the edge of the jacket using the middle hole on the stripper

Clean any impurities from your cable using alcohol and a lint-free cloth

Insert the fiber into the connector body until the strand meets resistance and bows slightly

Remove the connector jig

Lock the fiber inside the connector by pressing the amber button

Slide the adapter tube into the connector, then screw the boot onto the connector body and trim any exposed Kevlar yarn

To remove or re-terminate the connector, simple unscrew the boot and replace the jig
